DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 22-31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Naik et al (5548647) in view of Higgins (5339385) in further view of Juang et al (5590242).

As per claims 22, Naik et al (5548647) teaches:

"generating a codebook......plurality of training utterances" as storing the reference template of enrolled users (col. 5 lines 32-40;

"receiving a plurality......test utterances" as receiving training utterances (col. 5 lines 32-40);

"comparing...test utterances" as comparing stored utterances with user (col. 5 lines 38-40);

"combining the plurality ...verification decision" as deriving verification score form the averaged Euclidean minimums (fig. 16, subblock 186);

Naik et al (5548647) does not explicitly teach:

Art Unit: 2655

"comparing each of the plurality of test utterances to each of a plurality of training utterances", however, <u>Higgins (5339385)</u> teaches the concept of using non-enrolled user reference speaker data to measure a degree of similarity (Higgins et al, col. 4 lines 51-62). Therefore, it would have been obvious to one of ordinary skill in the art of speaker verification systems to improve upon the invention as taught by <u>Naik et al(5548647)</u> with non-enrolled user reference speaker data, and using such data to determine speaker verification because it would advantageously improve the accuracy of the verification system with yet another constraint (col. 2 lines 3-11).

The combination of Naik et al (5548647) in view of Higgins (5339385) does not explicitly teach forming a preliminary decision, however, Juang et al (5590242) teaches a telephone speech recognition system using a preliminary decision process(Fig. 2a, col. 3 lines 45-62). Therefore, it would have been obvious to one of ordinary skill in the art of speech recognition to modify the teachings of Naik et al (5548647) in view of Higgins (5339385) with preliminary decision making because it would advantageously reduce the computational load of the processor. (Juang et al (5590242), col. 3 lines 60-62).

As per claim 23, <u>Naik et al (5548647)</u> teaches "weighting each......decisions" as averaging Euclidean minimums (Fig. 16, subblock 184);

As per claim 25, Naik et al (5548647) teaches:

"evaluating a quality.....decisions" as measuring the test template versus the reference template (col. 15 lines 1-9; col. 14 lines 25-34);

As per claim 26, Naik et al (5548647) teaches:

Art Unit: 2655

"separating the speaker into a male group and a female group" as pilot data using twenty men and women (col. 14 lines 43-53);

"determining a male variance vector from the male group" as separating the speakers into groups of males and females (col. 2 lines 57-67) and then comparing each user to a template measuring the test template versus the reference template (col. 15 lines 1-9);

"determining a female variance vector from the female group" as separating the speakers into groups of males and females (col. 2 lines 57-67) and then comparing each user to a template measuring the test template versus the reference template (col. 15 lines 1-9);

As per claims 27-31, <u>Naik et al (5548647)</u> teaches:

"determining if the speaker...male or female"; "when speaker is male....utterance for the speaker"; "forming a decision...weighted Euclidean distance" as separating the speakers into groups of males and females (col. 2 lines 57-67) and then comparing each user to a template measuring the test template versus the reference template (col. 15 lines 1-9), and using a minimum Euclidean distance (col. 19, lines 35-42).

3. Claims 24 are rejected under 35 U.S.C. 103(a) as being unpatentable over <u>Naik et al</u> (5548647) in view of <u>Higgins (5339385)</u> in further view of <u>Juang et al (5590242)</u>, as applied to claim 22 above, further in view of <u>Young et al (4805222)</u>.

As per claim 24, Naik et al (5548647) in view of <u>Higgins (5339385)</u> in further view of <u>Juang et al (5590242)</u>does not explicitly teach:

"step of weighting.....false alarm....utterances", however, Young et al (4805222) teaches the calculation of the probability of a false rejection and a false miss (col. 5 lines 35-65, and accompanying Fig. 4), and the use of these probabilities to weight the outcome

Page 5

Application/Control Number: 09/489,254

Art Unit: 2655

(col. 15, line 45 - col. 16 line 16) in a verification system. Therefore, it would have been obvious to one of ordinary skill in the art of verification systems to improve the teachings of Naik et al (5548647) in view of Higgins (5339385) in further view of Juang et al (5590242) with determining probabilities of miss and false alarm because it would advantageously improve the method of analyzing for such errors and therefore lead to a more accurate verification system (Young et al, col. 6 lines 5-11).

Response to Arguments

4. Applicant's arguments filed 5/8/2003 have been fully considered but they are not persuasive. As per the arguments as to why the preliminary decision is performed, examiner argues that the applicant is arguing the specification, and not the claim language. Furthermore, the fact that Juang et al does the preliminary decision for different reasons eliminates any possible hindsight reconstruction issues.

Conclusion

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Art Unit: 2655

6. Any response to this action should be mailed to:

Commissioner of Patents and Trademarks Washington, D.C. 20231 or faxed to:

(703) 872 9314,

(for informal or draft communications, please label "PROPOSED" or "DRAFT") Hand-delivered responses should be brought to Crystal Park II, 2121 Crystal Drive, Arlington. VA., Sixth Floor (Receptionist).

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael Opsasnick, telephone number (703)305-4089, who is available Tuesday-Thursday, 9AM-4PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ms. Doris To, can be reached at (703)305-4379. The facsimile phone number for this group is (703)872-9314.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group 2600 receptionist whose telephone number is (703) 305-4750, the 2600 Customer Service telephone number is (703) 306-0377.
